

What is chlorine dioxide?

Chlorine dioxide (ClO₂) is a chemical compound consisting of one chlorine atom and two oxygen atoms.

It is used for a variety of antimicrobial uses, including the disinfection of drinking water.

Chlorine Dioxide (ClO₂)

What is it used for?

ClO₂ gas is used to sterilise medical and laboratory equipment, surfaces, rooms and tools.

ClO₂ can be used as an oxidiser or disinfectant. It is a very strong oxidiser and it effectively kills many types of fungi, bacteria and viruses.

Is it safe for humans?

ClO₂ is safely used to disinfect drinking water around the world and is included in the World Health Organization's (WHO) Guidelines for Drinking-water Quality.

We are using diluted food grade quality ClO₂. In its purest form, most people will not be exposed to ClO₂ in amounts large enough to damage parts of the body.
